

SÄLZER Steel Gates

Individual Security

Steel Gates – Reliable Day-to-Day

Detention facilities, industrial plants, refineries, data centers, military properties, logistics companies as well as banks or warehouses require special protection of the entrances to the building or separate building sections. Gates have to protect against unauthorized access as well as to assure smooth flow of the traffic.

SÄLZER steel gates prove themselves day-by-day. They are weatherproofed; they are extremely robust even under constant load, as well as easy to use, independent of the gate size! Every SÄLZER security steel gate is individual designed and produced based on the special requirements of the customer.

SÄLZER security steel gates offer not only the maximum of security but also an unlimited range of designs and colours:

- Swinging gates
- Sliding gates
- Folding gate
- Gates with bars
- Single or double and with sectional door available.

Surface:

- Galvanized and primed, ready for finishing on site.
- Painted according customer requirements or clad with various materials such as wood, stainless steel, stone etc.

Economical, Robust and Secure

Protection Categories

- Forced entry and break out resistance: meets the requirements of the resistance class WK5.
- Bullet resistance up to FB7 NS.
- Ram protection according to customer requirements.
- Blast resistance on request.

SÄLZER steel gates can be combined for an optimal vehicle separation as sally ports with a second steel gate or with a grill gate.

Gate drives and control systems

Different electro-hydraulic and electro-mechanic drives can be used. The gate control can be integrated into every facility management system.

Easy access by the sectional door.

Double sliding gate, roller rail on the top.
